

## BI-FOLD DOOR SYSTEMS

Bi-Fold door systems are the most commonly used in underground mining. The equalized design uses the air pressure to assist door operation. Bi-Fold door systems are typically a great option for locations with up to 10" WG pressure. For higher pressures please see our high pressure door systems.

### KEY FEATURES

- Up to 10" WG
- Available in free standing design
- Robust frame and panel construction
- Enclosed header to protect key components
- Sealed for less than 1% air loss
- Pneumatic or hydraulic actuation
- Sheeted on both sides
- 4 ½" diameter door pivots
- Hardened 4140 linkage & cylinder pins
- Heavy duty flange mount bearings
- Most durable rotating assembly in the industry
