

## HIGH PRESSURE DOOR SYSTEMS

HMFG's high pressure door systems are simply the strongest door available. They include many of the same construction features as our Bi-Fold system, but withstand pressures up to 20" WG pressure. Both doors open in the same direction and utilize heavy duty welded hydraulic actuators with load holding valves for added safety and efficiency. The door panels feature neoprene rubber to form a tight seal in the closed position.

### KEY FEATURES

- Engineered to 20" WG
- Available in free standing design
- Robust frame and panel construction
- Enclosed header to protect flange bearings
- Sealed for less than 1% air loss
- Welded hydraulic actuators with built in load holding valves
- Sheeted on both sides
- 4 ½" diameter door pivots
- Hardened 4140 cylinder pins
- Heavy Duty flange mount bearings
- Heaviest door available in the industry
